Portfolio: https://ankush-032.github.io/my-portfolio/

Career Profile:

- Results-oriented **.NET Developer** with **3.4 years** of experience in designing, developing, and deploying scalable healthcare applications. Skilled in **.NET Core**, **Angular (v12–v14)**, and **Dapper**, with strong focus on building secure RESTful APIs, optimizing performance, and integrating real-time communication using **SignalR**. Demonstrated expertise in implementing **JWT-based authentication**, **Firebase Cloud Messaging**, and **third-party integrations** (Stripe, Twilio, Zoom, Google APIs). Adept at collaborating in agile teams to deliver reliable, HIPAA-compliant solutions that enhance operational efficiency and user engagement.

- Seeking a challenging and growth-oriented role in an organization that fosters collaboration and offers diverse assignments to achieve personal and professional goals.

Key Skills:

Languages/Frameworks	C#, .NET Core (8/6/5),LINQ,Dapper
Databases	MS SQL Server (2019/2022)
Web Technologies	ASP.Net Core MVC, Web API, JavaScript, Angular(v12-v14), TypeScript
Engineering Tools	Visual Studio, SSMS, VS Code, IIS, GitLab, S3 Bucket, GitHub Copilot
Third Party Integration	Stripe (Payment), Twilio (Messaging), Zoom SDK (Meeting), Google APIs, Eligibility Check (Orbit HC), Vital Reading (Mio-Connect, Dexcom), Notification (FCM), Single Sign ON (SSO)
Cloud	AWS (S3 Bucket,KMS,Elastic Bean,Lambda) Azure (Blob Storage,Key Vault,Function)

Key Achievement:

- Rising Star of the Quarter (Jan 2024) Recognized as the Rising Star of the quarter at OSP Labs for outstanding performance

Education:

- Master of Computer Application: Mumbai University (2025)
- Bachelor of Computer Application (BCA) - School of Management Sciences Varanasi 2021

Working Experience:

OSP Labs | Software Developer

📍 ***Mumbai, India | Jul 2022 – Present***

A software development company specializing in healthcare, enhancing operational efficiency, productivity, and customer service for industry partners.

Projects: Baby Live Advice, Health Connect, Ambient Care

Backend (.NET Core)

- Designed and developed RESTful APIs, using ASP.NET Core MVC, supporting multi-client healthcare platforms.
- Implemented **Dapper ORM** for high-performance database access with **stored procedures** and complex SQL queries.
- Applied **Dependency Injection (DI)** and **custom Middleware** for centralized logging, exception handling, and validation.
- Secured APIs using **JWT Authentication & Authorization**, ensuring HIPAA-compliant access control.
- Built and optimized **meeting management modules**, handling scheduling logic, availability checks, and concurrency control.
- Integrated **SignalR** for **real-time communication** (notifications, live updates, chat).
- Implemented **Firebase Cloud Messaging (FCM)** for push notifications across platforms.
- Developed **custom logging and monitoring** using ILogger and activity tracking tables.
- Conducted **code reviews**, performance tuning, and production debugging to ensure system stability and scalability.
- Collaborated with product owners and QA teams during **agile sprints**, from design to deployment.

Frontend (Angular 12–14)

- Integrated **.NET Core APIs** into Angular applications, managing data with **RxJS** observables and services.

- Implemented **Google SSO (OAuth 2.0)** authentication for seamless user login.
- Built **dynamic and reactive forms** with real-time validation and condition-based field rendering.
- Used **interceptors** for **JWT token handling**, **global error logging**, and **toast notifications**.
- Implemented **pagination, filtering, and sorting** features for large datasets.
- Used **Google Cache / localStorage** for client-side caching and optimized API calls.
- Ensured **error resilience** through centralized error handling and retry mechanisms using RxJS operators.
- Collaborated closely with backend teams to debug API integrations and ensure consistent data flow.
